Project – AI BlogNest API

About the project

- AI BlogNest API is a backend API for a blogging platform.
- It helps users create, manage and access blog content.
- The API provides services through REST API endpoints.
- It can be integrated with web or mobile applications.
- AI-based features can support easier and smarter blog creation.

API

The diagram illustrates the architecture of the AI BlogNest API. It features a blue circle labeled 'API' positioned above a yellow rounded rectangle labeled 'BACKEND'. The 'BACKEND' box contains the text 'REST API based blogging service'. In the top right corner, there are two overlapping circles, one purple and one blue. In the bottom left corner, there is a single pink circle.

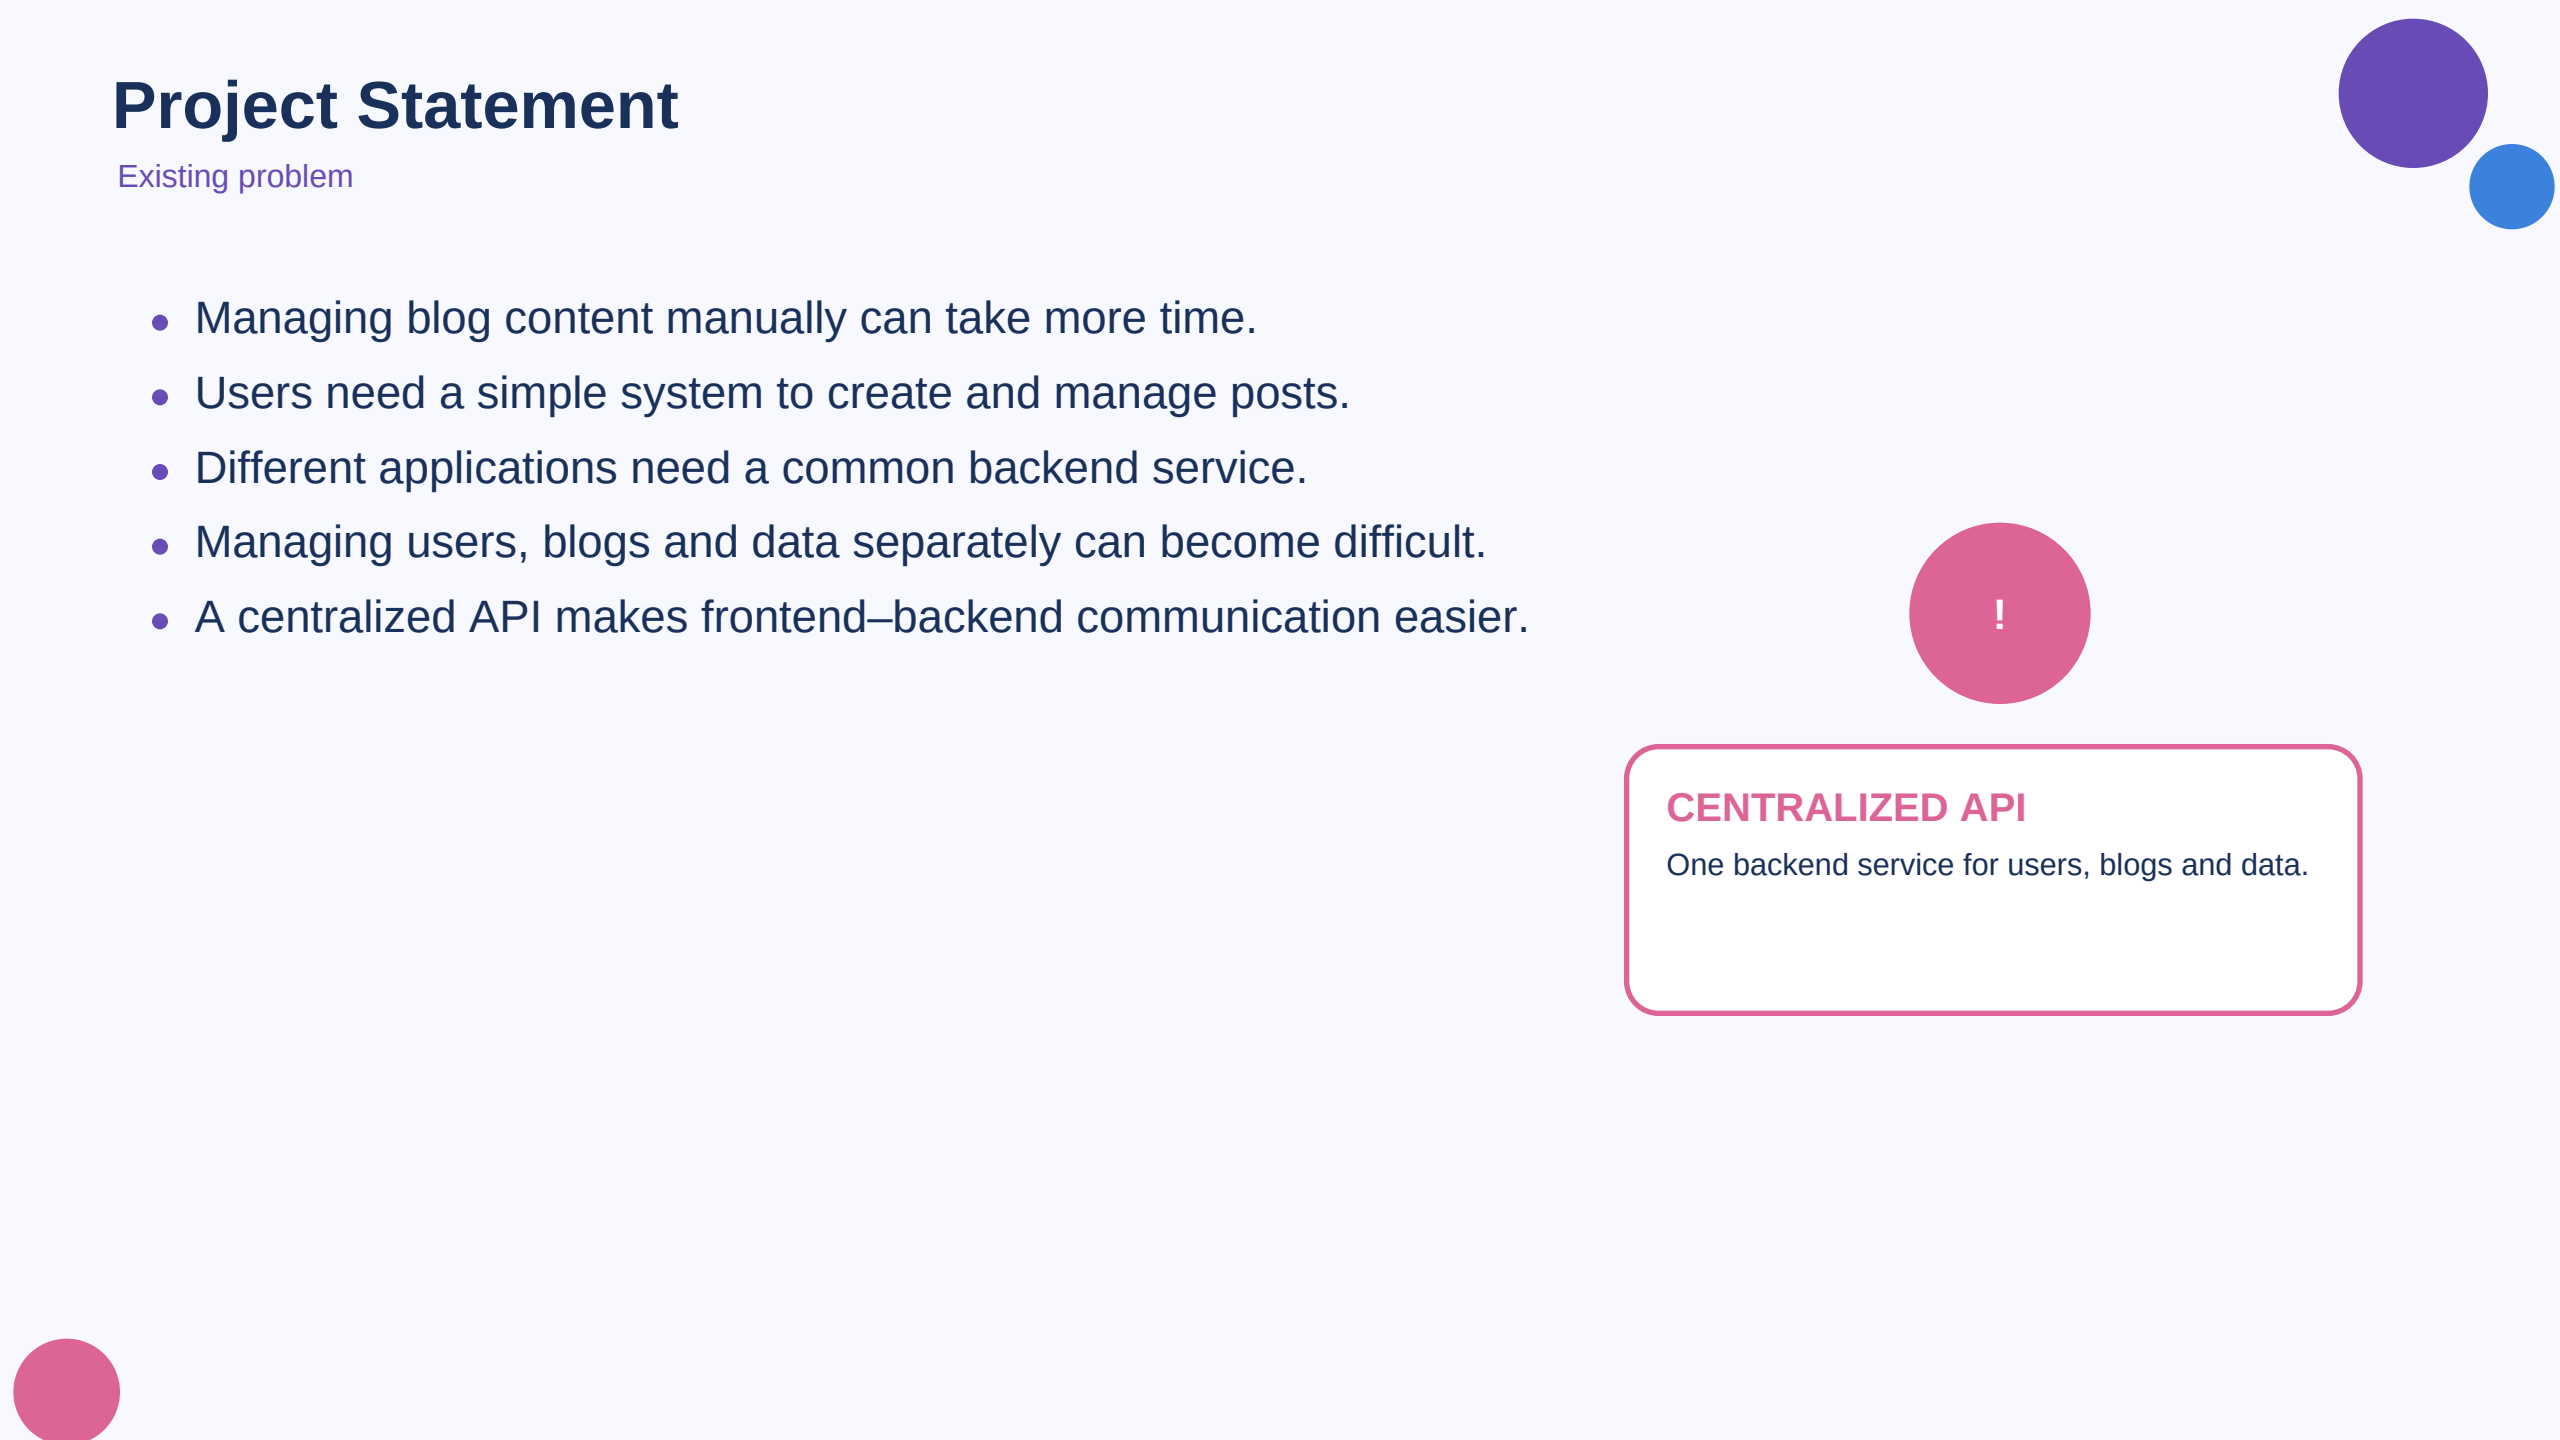

BACKEND

REST API based blogging service

Project Statement

Existing problem

- Managing blog content manually can take more time.
- Users need a simple system to create and manage posts.
- Different applications need a common backend service.
- Managing users, blogs and data separately can become difficult.
- A centralized API makes frontend–backend communication easier.

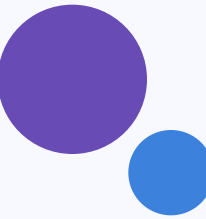

!

CENTRALIZED API

One backend service for users, blogs and data.

Objectives

Goals of AI BlogNest API

Simple API

Develop an efficient blog backend API.

Blog Management

Create, manage and retrieve blog posts.

User Operations

Handle user-related operations.

Data Management

Store and retrieve blog data efficiently.

Frontend Integration

Connect with different frontend applications.

AI Features

Explore AI support in blogging applications.

Technology

Technology stack

BACKEND

Node.js
Express.js

DATABASE

MongoDB / Project Database

API

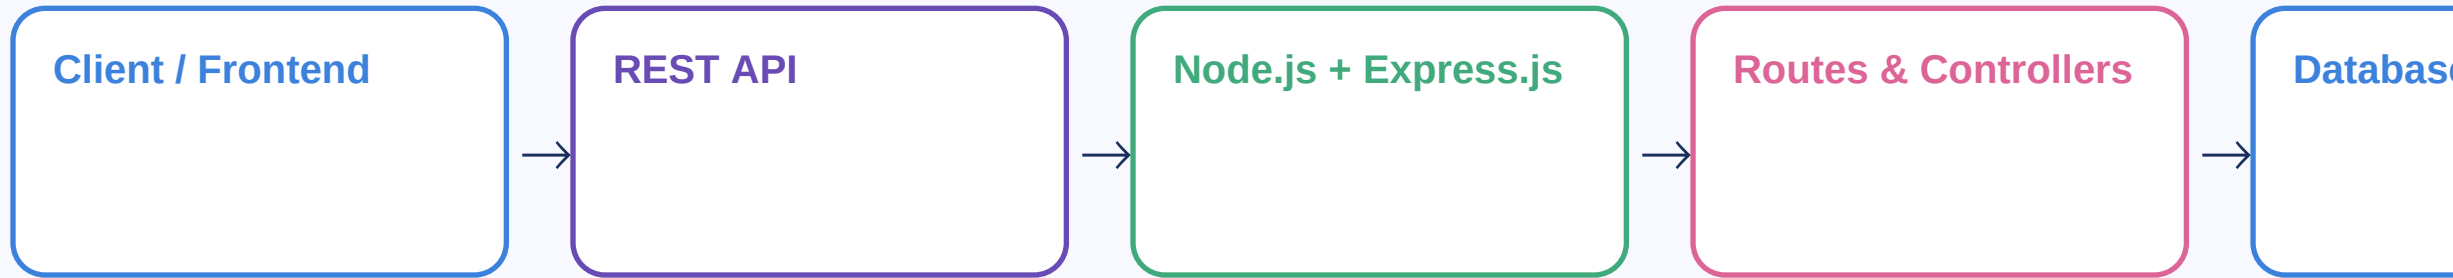

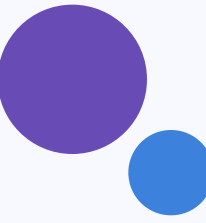

REST API
GET • POST • PUT • DELETE

AI

AI-based content support / features used in the project

System Architecture

Architecture of AI BlogNest API

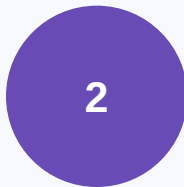

Workflow

How the API works

User sends
request

Request reaches
API endpoint

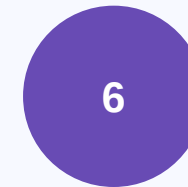

Express.js
processes request

Controller performs
operation

Database stores /
retrieves data

API sends
response

User receives
result

POST Request → Create Blog API → Validate Data → Store in Database → Success Response

API Features

Main features

USER MANAGEMENT

- User registration
- User login
- User information management

BLOG MANAGEMENT

- Create blog
- View blogs
- Update blog
- Delete blog

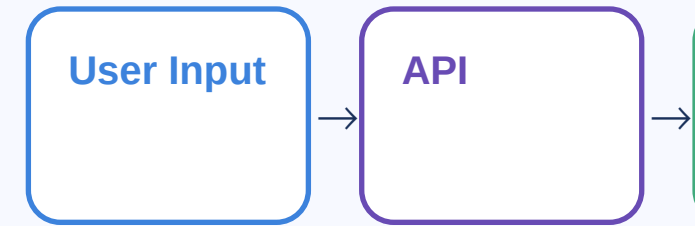

API CO

- GET – Re
- POST – C
- PUT – Up
- DELETE –

AI Integration

Role of AI in BlogNest

- Helps users with blog content creation.
- Can assist in generating or improving content.
- Reduces the effort required for writing.
- Can provide intelligent content-related features.
- Makes the blogging platform more user-friendly.

Testing & Demo

API testing using Postman

TESTING

- Testing API endpoints
- GET requests
- POST requests
- Update operations
- Delete operations
- API responses
- Error handling

DEMO

- API request
- API response
- Blog creation
- Blog retrieval
- Other important endpoints

Team Contribution

Roles and responsibilities

Natshitha.P – Team Leader

- Team coordination
- API development
- GitHub management
- Voice-over & demo video
- Project integration

Nivedha.A – Member 1

- PPT preparation
- Project documentation
- Presentation content
- API concept research
- Slide organization

Sanmathi.B – Member 2

- API testing
- Postman testing
- Documentation support
- Project research
- Presentation preparation

Conclusion

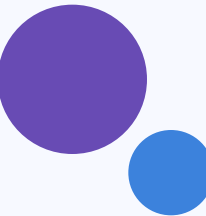

Project outcome

- AI BlogNest API provides a simple backend solution for blogging applications.
- It supports blog and user-related operations through REST APIs.
- Node.js and Express.js provide the backend framework.
- Database integration helps store and manage blog data.
- AI features can improve the blogging experience.
- The project provided practical knowledge in API development, testing, GitHub and presentation.

AI

PROJECT OUTCOME

Practical API development experience

Thank You
